CYBERSECURITY GOVERNANCE IDENTITY

Protecting Mission Assets

Securing your mission operations for success.

Cybersecurity has become synonymous with checking boxes and hindering productivity. We don't see it that way.

Our industry experts are able to take policy, directives, best-practices, and threat intelligence and synthesize it into a unique solution for your agency.

We take pride in our capability to deliver cross-functional teams to federal agencies. Constantly changing threats and technology landscapes are met by our unparalleled subject matter expertise. We have experience across all domains of Cybersecurity, including Information Assurance, Incident Response, ICAM, Vulnerability Management, Penetration Testing, and Security Engineering.

OUR APPROACH

RISK-ORIENTED EXPERTISE

Between balancing user needs and effective controls, cybersecurity can feel like a tug-of-war. Let's cut the rope. We focus on bridging policy and operations, distilling the latest directives and risks into actionable measures, and providing assurance to your senior leadership that the right steps were taken to keep the "black-suits-with-suitcases" from knocking on your door.

OPERATIONALLY FOCUSED

We believe that cybersecurity teams are NOT the 'cyber-police', but rather key enablers for your organization. Our corporate culture emphasizes knowledgeable SMEs which work up-stream with federal agencies, collaborate with functional teams, and enable CIOs to get where they want to go rather than resist the current. Our mission is to help you safely and successfully achieve IT Modernization.

DATA TO INTELLIGENCE

It is well-known that Cybersecurity is among one of the most difficult functional areas to derive measurable progress. With knowledge and subject-matter expertise unlike any other, we come to your agency on day one ready to apply metrics, dashboards, and reporting that are pre-vetted and effective. We work with you to identify the most critical data points and get you the data you need, when you need it to report up the chain.

AGENCY CHALLENGES

Agencies are working overtime to balance response to foreign and domestic threat actors, compliance with the latest policies and operational directives, and hardening legacy technologies for resilience against modern threats.

✖ The expansion of cloud services stretches the perimeter for most organizations, which could spell disaster at the loss of a single set of credentials.

✖ Many teams are lacking the right cross-functional skill sets which are capable of translating policy into operational capabilities.

✖ Applying legacy Defense-in-Depth principles can be a challenge for the latest technologies and cause visibility issues into your network.

RESULTS

FISMA Maturity L4
We were able to achieve FISMA Maturity Model Level 4 in FY19, a 2-level increase over one year on contract.

$480K Savings
Implemented and integrated SEIM tools to all for automatic defenses and incident response, saving more than $480,000 in associated costs.

99.6%
PIV Compliance Metrics
Our support for ICAM initiatives has delivered an exceptional 99.6% PIV compliance metrics.

96% ⬆
Security Scores
Increased agency vulnerability security posture scores by over 96% while driving scanning times down by 68%.

100%
Delivery of ATOs On Schedule
Our unique and agile approach to program management has successfully delivered 100% of ATOs on schedule and without issue.
